UMBRELLA CORPORATION

UMBRELLA CORPORATION

Umbrella was founded in 1968 by Lord Osweill E. Spencer, Sir Edward Ashford, and Dr. James Marcus after the discovery of the Progenitor virus the previous year. Another starting member (though not considered a co-founder) was Marcus' student Brandon Bailey, who was with Marcus and Spencer when they first discovered the Stairway of the Sun flower.

Ashford died from exposure to the virus, and Bailey was effectively exiled to the Umbrella Africa Laboratory, where he would send virus samples to Dr. Marcus' newly built Umbrella Executive Training Center.

In 1969, Edward's son Alexander began the construction of the Antarctic Base, attached to which was a research center where he began development of his "Code: Veronica" project, under which he began research into the gene that controls intelligence. From said research, Alfred and Alexia would be born two years later.

Seeking new information on Progenitor, Marcus infected several of his students with the virus. They were, however, unable to survive its effects and died, their corpses dumped in the Water Treatment facility.

Marcus injected leeches with Progenitor in 1978 and bore witness to the creation of a new strain which he named the "t-virus". Later this year, the Training facility would be closed and Marcus' two prized students: Albert Wesker and William
